# Mohamed Samir

Full-Stack Engineer, AI products

yxu.vercel.app · Cairo, Egypt (UTC+2)
mohamedsamir177@outlook.com
github.com/yxu173 · linkedin.com/in/yxu

Full-stack engineer who builds AI products end to end: agents, RAG and workflows, the backend underneath them and the interface on top. At Zynda AI I work across backend, frontend, AI and DevOps on Zynda, a multi-agent assistant platform in production, and I ship open-source agent tools on the side.

## Experience

**Full-Stack Engineer**, Zynda AI — Feb 2025 — Present

Zynda, live at zynda.ai: one chat box in front of 11 specialist agents

- Work across the whole platform: agents that research, write PDF/PPTX/XLSX/DOCX files, build and deploy apps, edit images and act in **37 connected apps**.
- **Backend:** tRPC APIs, Postgres with Drizzle and pgvector, long-running jobs on Trigger.dev streamed back through Redis, Daytona sandboxes.
- **AI:** agent router and specialist lanes on Mastra and the Vercel AI SDK, the Deep Research pipeline (plan, parallel gathering, cited report), five-layer memory.
- **Frontend:** Next.js 16 and React 19 chat, Studio node canvas for image and video, document viewers; WCAG 2.2 AA.
- **DevOps:** deployments, CI/CD and infrastructure upkeep.

## Open-source projects

**yxu-code**, multi-agent orchestrator for the terminal — Oct 2026

github.com/yxu173/yxu-code · TypeScript, Bun, Claude Agent SDK · MIT

- Claude Code (Opus) plans and reviews while local coding agents (Claude, OpenCode, Command Code, any ACP agent) build in isolated git worktrees; nothing reaches the branch until the user applies it.
- 10 agent roles, feature/bugfix/review workflows, GitHub issue to pull request and CI fixes; custom terminal UI, 179 tests.

**yxuOS**, AI workspace for teams — May 2026

yxu-os.vercel.app · github.com/yxu173/yxuOS · Next.js, Mastra, pgvector

- Whiteboards, a design canvas, research notes, plans and tasks in one workspace, with four Mastra agents (board, design, researcher, planner) and scorers that grade agent turns to catch prompt regressions.
- A project brain: boards, designs, tasks, notes and imported GitHub code embedded in pgvector for search and agent context.

**scy-ai**, AI content curation — Jul 2026

scy-ai-mu.vercel.app · github.com/yxu173/scy-ai · Next.js, Mastra, Postgres

- An agent turns a topic into a tracker with real sources and keywords; Mastra workflows fetch up to 28 sources in parallel, de-duplicate, rank and summarize, and refresh every tracker daily.

**Internship Connect Egypt**, student and company matching — 2023

github.com/yxu173/Internship-Platform · .NET, React, ML.NET, SQL Server

- Matching, AI resume builder and application tracking; pilot with 850+ students.

## Skills

| | |
|---|---|
| **AI** | Mastra agents and workflows, Vercel AI SDK, RAG with pgvector, agent evals |
| **Backend** | TypeScript, Bun, Node, tRPC, PostgreSQL, Drizzle, Redis, .NET |
| **Frontend** | Next.js, React, Tailwind CSS, canvas and terminal UIs |
| **Infra** | Vercel, Neon, Trigger.dev, Daytona, GitHub Actions, Linux |

## Education

**Computer Science**, Faculty of Science, Menofia University — 2021 — 2025
